Break - Car Crash + Recovery + Side Projects - [React, Typescript, Python,]

July 2024 - Present

Project highlights: an ERP for the largest tissue culture wholesaler in the country, an alternative code viewer for less technical people, refactoring tooling for vibe coded sites, and strategies to beat the house at classic vegas table games

Roblox - Software Engineer, Growth - [React, Lua, C++, Java]

July 2021 - July 2024

- Made an 18% gain in playtime from notifications by fixing issues in the notification system, and adding in-game toasts informing users when their friends joined/left
- Halved the time to interactive on startup by optimizing the network requests required to start the app
- Improved game-join success rate by 4%. I identified common game-join failure cases and redesigned the flows to assign game servers.

UC Berkeley - Computer Science

Class of 2021

- Research to improve performance of bulk genome sequencing on the MetaHipMer project. I attempted to write a GPU implementation of a memory efficient bloom filter.

Public Editor - Research Software Engineer/ Team Lead - [Python, Numpy, Pandas]

Jan 2018 - Feb 2022

Public Editor is a collaborative platform for identifying misinformation. I was the first engineer on the project, and designed the systems that make it work.

- Designed a consensus measurement framework for text annotations by extending the standard to factor in text selection, creating a system that is widely utilized in academic research
- Led a team of 30 undergrads that optimized misinformation scoring algorithms, added gamification and social growth features, and upgraded the user interfaces
