July 2024 - Present

Tech Stack: React, TypeScript, Python, Flask

Following a car accident, focused on rehabilitation and worked on personal projects.

Roblox - Software Engineer, Growth

July 2021 - July 2024

Tech Stack: React, Lua, C++, Java

Worked on the mobile application lifecycle and core user interfaces.

- Halved the time to interactive on startup by optimizing the network requests required to start the app
- 2% improvement in app startup success rate by adding retry mechanisms to common points of failure.
- Improved game-join success rate by 4%. I identified common game-join failure cases and redesigned the routes to get users into games. Worked with designers to add in-game toasts to reduce user confusion.

UC Berkeley - Computer Science

Class of 2021

- Research to improve performance of bulk genome sequencing on the MetaHipMer project. I attempted to write a GPU implementation of a memory efficient bloom filter.

Public Editor - Software Engineer

Jan 2018 - Feb 2022

Tech Stack: Python, Numpy, Pandas

Public Editor is a collaborative platform for identifying misinformation. I created the data systems that make it work, and led a team that worked to optimize the process.

- Designed a framework for measuring consensus among text annotators. I extended the existing standard to factor in annotators' selected text in addition to their question responses. This new framework continues to be widely utilized in academic research.
